Aims and Scope

The *Journal of Computational and Applied Mathematics* publishes original papers of high scientific value in all areas of applied mathematics. The main interest of the Journal is on papers describing new computational techniques for solving real scientific problems. Also carefully tested algorithms are published.

The Journal will also concentrate on the interaction between different fields of applied mathematics. In this connection survey papers and bibliographies are published.

The Journal does not publish papers that are too technical or are of very specialized nature. The papers should be readily understood by readers whose speciality lies outside the subject area.

The 'Letter Section' contains short communications and comments of at most three journal pages, which are published as rapidly as possible.
