JOURNAL OF COMPUTATIONAL AND APPLIED MATHEMATICS

Volume 199, Number 2, 15 February 2007

Contents

<i>G. Alefeld, M.T. Nakao and S.M. Rump</i> Preface	197
<i>S.M. Rump and T. Ogita</i> Super-fast validated solution of linear systems	199
<i>A. Rauh, M. Kletting, H. Aschemann and E.P. Hofer</i> Reduction of overestimation in interval arithmetic simulation of biological wastewater treatment processes	207
<i>M. Kletting, A. Rauh, H. Aschemann and E.P. Hofer</i> Consistency tests in guaranteed simulation of nonlinear uncertain systems with application to an activated sludge process	213
<i>G. Mayer</i> On regular and singular interval systems	220
<i>A. Marciniak</i> On multistep interval methods for solving the initial value problem	229
<i>Y. Hiraoka and T. Ogawa</i> An efficient estimate based on FFT in topological verification method	238
<i>T. Suzuki and T. Suzuki</i> An eigenvalue problem for derogatory matrices	245
<i>E. Auer</i> Interval modeling of dynamics for multibody systems	251
<i>U. Schäfer</i> On computer-assisted proofs for solutions of linear complementarity problems	257
<i>X.-M. Niu, T. Sakurai and H. Sugiura</i> A verified method for bounding clusters of zeros of analytic functions	263

<i>W. Luther</i>	
The convergence rate of continued fractions representing solutions of a Riccati equation	271
<i>É. Walter and M. Kieffer</i>	
Guaranteed nonlinear parameter estimation in knowledge-based models	277
<i>N. Yamamoto and K. Genma</i>	
On error estimation of finite element approximations to the elliptic equations in nonconvex polygonal domains	286
<i>T. Sogabe and S.-L. Zhang</i>	
A COCR method for solving complex symmetric linear systems	297
<i>S. Miyajima and M. Kashiwagi</i>	
Existence test for solution of nonlinear systems applying affine arithmetic	304
<i>E. Popova and W. Krämer</i>	
Inner and outer bounds for the solution set of parametric linear systems	310
<i>K. Petras</i>	
Principles of verified numerical integration	317
<i>F. Kikuchi and H. Saito</i>	
Remarks on a posteriori error estimation for finite element solutions	329
<i>K. Ozaki, T. Ogita, S. Miyajima, S. Oishi and S.M. Rump</i>	
A method of obtaining verified solutions for linear systems suited for Java	337
<i>K. Moriya and T. Nodera</i>	
A new scheme of computing the approximate inverse preconditioner for the reduced linear systems	345
<i>M.C. Markót</i>	
Interval methods for verifying structural optimality of circle packing configurations in the unit square	353
<i>E. Dyllong and W. Luther</i>	
Verified convex hull and distance computation for octree-encoded objects	358
<i>T. Kawanago</i>	
Improved convergence theorems of Newton's method designed for the numerical verification for solutions of differential equations	365
<i>Y. Lebbah, C. Michel and M. Rueher</i>	
An efficient and safe framework for solving optimization problems	372
<i>T. Csendes, B. Bánhelyi and L. Hatvani</i>	
Towards a computer-assisted proof for chaos in a forced damped pendulum equation	378

<i>B. Tóth, J. Fernández and T. Csendes</i> Empirical convergence speed of inclusion functions for facility location problems	384
<i>H. Tapamo and A. Frommer</i> Two acceleration mechanisms in verified global optimization	390
<i>A. Frommer, F. Hoxha and B. Lang</i> Proving the existence of zeros using the topological degree and interval arithmetic	397
<i>M. Ceberio, V. Kreinovich, S. Chopra, L. Longpré, H.T. Nguyen, B. Ludäscher and C. Baral</i> Interval-type and affine arithmetic-type techniques for handling uncertainty in expert systems	403
<i>V. Kreinovich, O. Kosheleva, S.A. Starks, K. Tupelly, G.P. Dimuro, A. Carlos da Rocha Costa and K. Villaverde</i> From intervals to domains: Towards a general description of validated uncertainty, with potential applications to geospatial and meteorological data	411
<i>V. Kreinovich, L. Longpré, S.A. Starks, G. Xiang, J. Beck, R. Kandathi, A. Nayak, S. Ferson and J. Hajagos</i> Interval versions of statistical techniques with applications to environmental analysis, bioinformatics, and privacy in statistical databases	418
<i>M. Tabata</i> Discrepancy between theory and real computation on the stability of some finite element schemes	424
<i>K. Toyonaga</i> A method for separating nearly multiple eigenvalues for Hermitian matrix	432
<i>H. Schwandt</i> Parallel interval Newton-like Schwarz methods for almost linear parabolic problems	437
<i>K. Nagatou, K. Hashimoto and M.T. Nakao</i> Numerical verification of stationary solutions for Navier–Stokes problems	445
